

Thanks a lot! I really appreciate it!

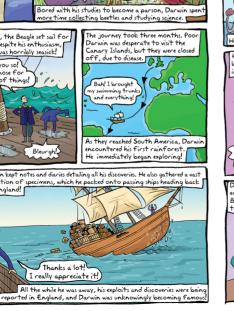

posh English gentleman!

He also collected many fossil specimens, noting

peculiar similarities to animals still living...

polite, how can I arque?

I say! In you go

Phew! That should clear

it up once and for all!

Along with fossil records

of so-called 'missing links', here was

final scientific proof of Darwin's ideas

time. His ideas changed

the way we look at the

world and everything in it

Back home in England, Darwin sifted through

his findings. He spotted patterns in the

celationships of species, which he called.

He theorised that rather than all of Earth's

species changes over time into a new

separate species having appeared at once, each
