## Vertically opposite angles

1 The diagram shows four angles formed by two straight lines

a) Measure the sizes of the angles.

$$
a=130^{\circ} \quad b=50^{\circ} \quad c=130^{\circ} \quad d=50^{\circ}
$$

b) What is the total of angles $a$ and $b$ ?

Explain why.
Adjacent angles on a sorouight line sum to $180^{\circ}$
Do any other pairs of angles have this same total?
c) Angles $a$ and $c$ are vertically opposite angles.

What do you notice about the sizes of angles $a$ and $c$ ?
They are equal
d) Angles $b$ and $d$ are also vertically opposite angles.

What do you notice about the sizes of angles $b$ and $d$ ?
They are equal.
e) Complete the sentence.

Vertically opposite angles are equal.
(2) Tick the pairs of angles that are vertically opposite.

Compare answers with a partner.
(3) Work out the sizes of the unknown angles. Give reasons for your answers.
a)

b)

Annie is working out the size of angle $f$.

Do you agree with Annie? No
Explain your answer.

5 Work out the unknown angles
a)

c)

b)
d)

e)

f)

Talk about your reasons with a partner.

Angle $b$ is three times the size of angle $a$

Work out the sizes of angles $a$ and $b$.
$\square$

$$
b=60^{\circ}
$$

(7) Angle $f$ is one quarter of the size of angle $g$.

Angle $f$ is $28^{\circ}$.

Are angles $x$ and $y$ vertically opposite? No
Explain your answer.
$28 \times 4=112$
So $g=112^{\circ}$
$112+28=140$
$139 \neq 140$ theregore the diagram does not show vertically
opposite angles.
